

Data Loss? Your backup fails?

Dont just throw away your data !

Dont just send your hard disk to be replaced.
Dont just reformat your hard disk

Your business is your data
Save your data and save your business.

Typical Symptoms/Characteristics of a Common Data Loss Situation

- Accidental deletion of data.
- Accidental reformatting of partitions.
- Hard disk crash or hard disk component failure.
- Ticking or grinding noises.
- Computer won't boot. Blue or black screen after power up. The system will not load Windows (or other O/S).
- Applications that are unable to run or load data:
 - Try and fail to start an application such as Excel or Word.
 - Try and fail to load a file while running Excel or Word.
 - Folders that should be full of files but appear empty.

- Inaccessible drives and partitions.
- Corrupted data.
- Visible fire or water damage.
- Media surface contamination and damage.

What to do?

You risk aggravating the damage by trying to repair the error yourself. If you suspect that data has been lost, we recommend the following:

- Don't panic
- Turn off the power
- Do not reinstall any software
- Do not write any files to hard disk
- Do not open the hard disk or try to repair it yourself
- Do not use automatic recovery tools
- Assess the situation
- Contact SCS-Myung for advice
